

## Provelt™ Program

Argonide is proud to present the **Provelt™ Program** as part of an ongoing effort to expand the use of its patented NanoCeram<sup>®</sup> technology into new markets.

This program has been designed for those facing challenges with specific applications for which they are seeking innovative solutions as part of a new approach. Our NanoCeram<sup>®</sup> technology does offer a different tack and the program will seek to prove the value of this technology.

The **Provelt™ Program** provides for a limited supply of free NanoCeram<sup>®</sup> filters for the sole use of proving the concept. Based on the responses to the questions below, Argonide will work closely with the Applicant to determine the best course of action to follow using NanoCeram<sup>®</sup> technology.

If you wish to be considered for this program, please provide detailed responses to the following five (5) questions. We will review your responses and you will hear back from us within one (1) week of your application.

1. Describe the challenge itself to include the water quality being tested and the desired results (what is the intended water quality target?) by using NanoCeram:

---

---

---

---

---

---

---

2. Describe the flow rate and capacity desired: \_\_\_\_\_ .

3. Describe the current water treatment process in the application:

---

---

---

---

---

---

---

4. Provide detailed results comparing both before (current water quality with the current treatment) and after (using NanoCeram):

---

---

---

---

---

---

---

5. Describe the benefits discovered by using NanoCeram<sup>®</sup> filters. For example . . . may include possible economic advantages (does a water treatment system work better/longer or more efficiently by using NanoCeram<sup>®</sup>), better tasting/smelling water, improved health (often found in farm animal treatment applications), clearer water, better flow rates, reduced energy consumption, etc.:

If selected, Argonide will partner with the successful Applicant and use this information to create marketing/promotional materials such as a Case Study, brochure pieces and advertisements, and/or to submit an article for publication.

Although it is much preferred to have the name of owner of the facility, this may not be required depending on the nature of the project itself.

In all cases, the Applicant has access to all materials for their own marketing efforts.

By signing here, you agree to the requirements for participation as described above as of this \_\_\_\_ day of \_\_\_\_\_, 201\_\_\_\_.
